Auto Downscaling & Conversion

This 1x2 splitter features automatic downscaling and format conversion on all outputs. Before downscaling, it analyzes the EDID data from all connected display devices and selects the lowest supported resolution to ensure optimal compatibility. For example:

Note: If the source resolution is downscaled and converted to 1080P DVI according to the EDID of display devices, it will be output without sound on the TV.

Downscaling will not work in the following conditions:

1. The input source is 8K DSC format.
2. The resolution of the input source is not supported by the splitter.
