**AVAILABLE IN A 1X8 MODEL:**

**BG-UDAIC-E18**

This extender/splitter kit enables operators to distribute one HDMI input to up to four extender outputs and extend signals up to 70 meters (230 feet) with CAT 6/6A/7 network cables. This enables operators to host video and audio from a location farther away from displays and speakers without having to worry about the latency and unreliability of a wireless connection.

The BG-UDAIC-E14 supports resolutions up to 4K@60Hz. Despite sending the signal long distance, zero-latency transmission gives this kit an advantage over wireless connections. Using a wired connection for this purpose gives higher and more consistent image quality when compared to a wireless connection.
